

# **Session Description Protocol draft-ietf-mmusic-sdp-new-06.txt**

Colin Perkins

USC Information Sciences Institute

# Status

- Update to SDP “classic” to fix bugs, prior to advancing to draft standard RFC
  - Trying to avoid adding new features
  - See SDPng for that...
- Two revisions since last meeting:
  - 05 draft at start of February
  - 06 draft now
- Minor update to follow...
  - A couple of issues resolved on the mailing list

# Changes in -05

- Clarify that a=recvonly does **not** mean that you don't send RTCP
  - Similar changes for a=sendonly and a=inactive.
- Fix ABNF to include a unicast-address element, allowing comedia to align with both this and RFC2327
- "s= " rather than "s=-"
- Fix ABNF to reflect that s= is mandatory
- Clarify that s= is non-empty, and the contents SHOULD be ISO 10646

# Changes in -06

- make ABNF compliant with
  - RFC 2234
  - draft-ietf-mmusic-sdp-ipv6-03.txt

# To do

- allow a=rtpmap to be a session level attribute, in addition to a media level, as discussed on the mailing list
- TTL parameter for IPv6 multicast?
  - message to mailing list yesterday

# Future work?

- Ready for last call?
- Interoperability testing...
  - Volunteers?
