

# RTP over DCCP

Colin Perkins

# draft-ietf-dccp-rtp-04

- Changes since -03:
  - SDP requires new protocols to define a namespace for the media formats they transport. Specify that the same rules apply for DCCP as for UDP
    - For RTP, use payload type number
    - For non-RTP, use media sub-type name
  - Clarify relation to the draft on RTP with TCP Friendly Rate Control, since that is no longer defined as an RTP profile.
  - Update references
  - Editorial clarifications
- No open issues: ready for WG last call
