

# SDP: Session Description Protocol

`draft-ietf-mmusic-rfc4566bis-12`

IETF 91 – Nov. 2014

**Ali C. Begen**

**`abegen@cisco.com`**

# Major updates since the IETF 90

- Terms have been updated to be compliant with the avtext-rtp-grouping-taxonomy draft
- Attribute syntax updates and ABNF definitions in Section 6 (Thanks to Paul K.)
  - Clearer definitions
  - Best practices in defining new attributes
- Updated attribute registration requirements
- Proposed IANA updates are discussed in a separate draft
  - draft-begen-mmusic-rfc4566bis-iana-updates-00

# Outstanding Issues

- Christer H. reviewed the changes:
  - Offer/answer considerations: These are missing for attributes defined in 4566bis
  - Bundle considerations: Should we indicate which “category” an attribute is associated with?
- Christian G. caught some missing attributes and values:
  - Network "TN" and address type "RFC2543" from RFC2848
  - Attributes a=phone-content, a=clir, a=Q763-nature, a=Q763-plan, a=Q763-INN, a=require
  - PROTO values "voice, fax" and "pager"
