SDP Grouping Issue

- Grouping attributes
  - LS, FID (RFC 3388)
  - ANAT (RFC 4091)
  - FEC (draft-li-mmusic-fec-grouping-00.txt)

Issue:
- Signaling alternative RTP Profiles for the same media stream
  - Choose one out of several alternatives
    - E.g., AVP vs. SAVP vs. AVPS vs. SAVPF

Options:
- Same port: something in SDP defined (but implicit behavior)
  - Not included in offer/answer examples
- FID has different semantics
- ANAT only works for different address families

Other ideas?
